DESCRIPTORS: \*Semiconductors, \*Single crystals,  
\*Cadmium compounds, \*Sulfides, \*Rectifiers,  
Coatings, Silver compounds, Copper compounds,  
Oxides, Electrical properties, Photoconductivity.

A new way of obtaining relatively good rectification  
from cadmium sulphide single crystals is reported in  
which the anode plays a decisive role with respect to  
the forward current. It is presumed, on the basis of  
the experimental measurements, that in this case not  
only the injection of electrons from the cathode, but  
also that of holes from the anode, plays an essential  
role. (Author)
